

## Geopolitical Risk

### Safeguard against foreign influence, protect IP, and mitigate disruption from political tensions

#### Challenges

Globalization has contributed to an increasingly complex web of multi-tier supplier networks, often obscured by layers of holding companies and limited public information. This lack of transparency enables political and economic adversaries to conceal foreign ownership, steal intellectual property, disrupt critical infrastructure, and execute cyber attacks.

Without accurate and reliable supplier data, it is extremely challenging to understand ultimate beneficial owners (UBOs) and foreign investment, which makes it difficult to safeguard your supply chain against foreign influence. This can leave you vulnerable to economic espionage, IP theft, and other disruptions caused by political tensions.

Craft delivers extensive foreign influence data to simplify and streamline due diligence, and protect your business.

#### Categories of Foreign Influence:

- Financial Risk
- Foreign Investors
- Foreign Affiliations
- Regulatory and Compliance Violations
- Cyber Risk
- Foreign Influence in Technology Transfer

**Save time** with faster, easier supplier evaluations and more reliable data

**Protect** against foreign influence and financial instability

**Safeguard** your IP and bottom line

**Avoid disruption** by minimizing reliance on high-risk suppliers

## Craft's Solution for Geopolitical Risk
